

# Butterfly Facts

DURING ITS LIFE A BUTTERFLY PASSES THROUGH FOUR STAGES . . .

LIFE BEGINS AS AN EGG LAID ON A PLANT THAT WILL BE FOOD FOR . . .

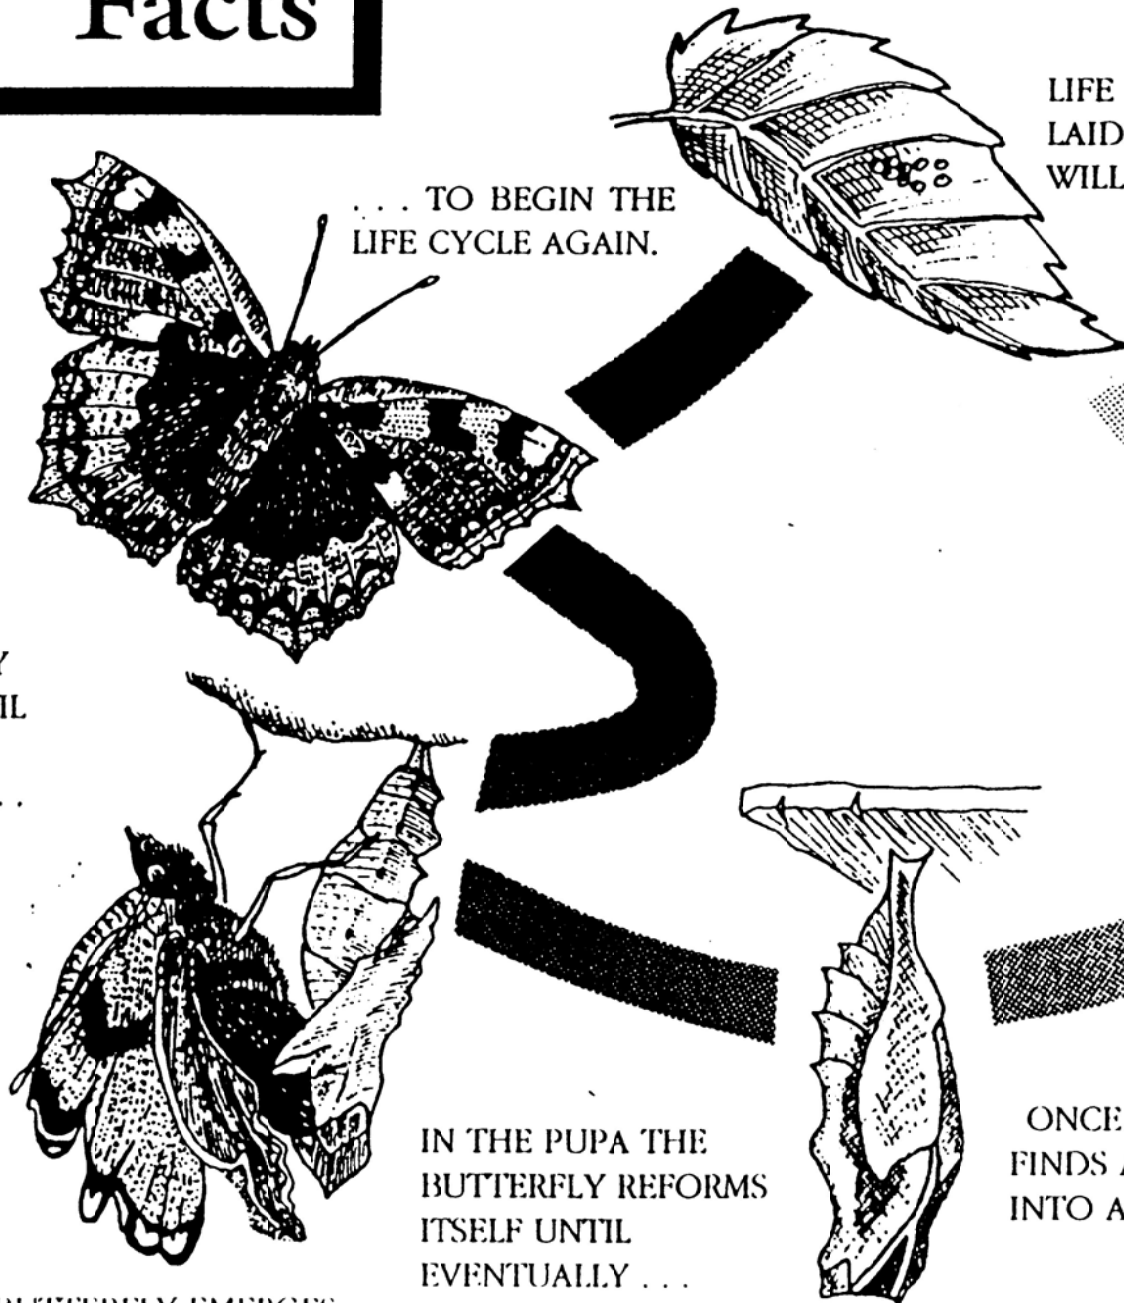

. . . TO BEGIN THE LIFE CYCLE AGAIN.

. . . THE CATERPILLAR. AFTER HATCHING, THE CATERPILLAR GROWS, HELPED BY A VORACIOUS APPETITE AND . . .

FIVE OR SIX CHANGES OF SKIN!

ONCE FULLY GROWN, THE CATERPILLAR FINDS A SUITABLE SITE AND FORMS ITSELF INTO A CHRYSALIS, OR PUPA.

IN THE PUPA THE BUTTERFLY REFORMS ITSELF UNTIL EVENTUALLY . . .

. . . AND . . . THEN FLIES OFF IN SEARCH OF A MATE . . .

THE BUTTERFLY RESTS UNTIL ITS WINGS ARE DRY . . .

THE ADULT BUTTERFLY EMERGES.
